Recap From Last Month

Quick way to tell if your computer is infected: when you look on your computer and you see things like Regcure, my Web search, fun Web products, quick shopping, easy shopping on your Internet Explorer toolbar is a quick and easy indication that things have install on your computer that are not good for.

Blackouts: Don't let them interrupt your work and destroy your hardware.. Install a UPS.

Ink Usage in printer: printer use ink when you turn them on and off, so it may pay to leave them on.

This Month

UPS's:

I learnt something very interesting this month, yes even I learn new things. The batteries used in UPS's are similar to your car battery and need to be changed every two to three years, if you do not do this you will find that your UPS will not hold a charge so when the power goes out so will your computer. So if your UPS is more than three years old do a power down tests. Remember to make sure your computer is off, leave your monitor on so you can see the Orange Power light turn off. Turn the UPS off from the wall and see if the monitor stays on. If it does your battery needs changing. Check your manual for the replacement type of the battery and searched on-line for a replacement and the cost, if the cost is 80% of the replacement of UPS replace the whole unit, better to have new than keep old.

Large Email sending:

In these modern days of large e-mail, Microsoft have forgotten to change the default timeout when sending e-mails. This can lead to the e-mail being sent multiple times clogging up recipients mailboxes and sometimes causing them to exceed their bandwidth limits. The easiest way to tell this is happening is that the e-mail sits in the out going mail folder even after you have done a send and receive. To Fix, look what e-mail clients(outlook, outlook express, thunderbird.) you are using and then Google “changing timeout value for your (mail client name)”

Slate Computers:

With the new breed of computing now at a fingertips such as the Ipad, many of Apples competitors are following their example. Like any computer you have to ask yourself what do I want this to do, and can it do it. Even though the Ipad has a lot to offer its still fall short of a truly practical device. As with its competitors have instilled in their devices with the practicality of USB, memory card slot, for transferring music, data, and photos. Plug in external hard drives filled with movies or music for kids on the move. A lot are based around Windows 7, this gives you the ability to put practical applications, programs and games on your slate computer.
